Noise and Vibration: Emerging Methods

NOVEM 2021 is the 7th in the series of NOVEM conferences. The conference will be a major gathering of researchers, from research establishments and from industry, working in the areas of noise and vibration.

The emphasis of the conference is on new and emerging methods, techniques and technologies in acoustics and vibration. The focus is on specially selected thematic areas, presented in Keynote Forums, which represent many of today's major scientific challenges related to noise and vibration.

Expressions of interest are invited for contributed papers in areas relating to noise and vibration modeling, control, design and measurement.
